Essentia Protein Solutions, North America Launches No-Antibiotics-Ever Poultry Products

Ankeny, IA – Essentia Protein Solutions, North America, is pleased to announce the expansion of its line of ProBase™ and ScanPro™ ingredients to include No Antibiotics Ever (NAE) chicken and turkey products. These innovative new products will be added to our portfolio of ingredient solutions which deliver numerous processing and clean-label benefits for meat, savory and nutrition products.

The consumer demand for NAE poultry is increasing rapidly and these specialized products provide new solutions for food companies looking to take advantage of this growing market. The NAE products will be produced under USDA inspection from birds that have not received antibiotics.

“More and more shoppers are requesting the meat and poultry products they purchase be free from antibiotics and ingredients not typically found in their kitchen,” said Corey Jansen, President and CEO of Essentia Protein Solutions North America. “We’re excited to offer our customers new, clean-label protein solutions for products they wish to market as NAE.”

Meeting the demand for new innovative solutions requires strong partnerships all the way through the value chain. Essentia is dedicated to delivering new solutions to our customers as they innovate to meet consumer needs.

For more information on these newly developed NAE products and the other protein solutions from Essentia, please contact us at contact.usa@essentiaproteins.com.

About Essentia Protein Solutions

Using advanced protein extraction and fractionation process, Essentia creates valuable protein solutions for the global food and nutrition industries.
